

SQL Server Seminars

The following is a list of SQL Server seminars that can be presented at your user group or other live event by **Paul D. Sheriff**.

Essentials of SQL Server

SQL Server is one of the most used databases today. In this session you learn the basics of how to get started using this powerful database server. Get started creating databases, tables, indexes, stored procedures and views. Learn the basics of the T-SQL language used to query and modify data.

Learning Objectives

- Create a database

- Create database objects such as tables

- Learn to use the powerful T-SQL language

Tips and Tricks for Importing Data into SQL Server

The SQL Server Import/Export Wizard tool is not a good tool for importing .CSV files. There are better ways to accomplish this task. In this seminar a free CSV import tool written in C# is illustrated. In addition, you learn a process for importing .CSV data, then massaging that data into a final form from which you perform better reporting on that data. You see some useful stored procedures and functions that can be used to clean up and import data.

Learning Objectives

Problems with SQL Server Import/Export

Using a C# utility to import data

Useful stored procedures and functions for importing data
